NAICS: 541511 (P), 541512, 541519

WHO WE ARE

Turntech Data Solutions LLC is a SDVOSB built to transform fragmented government acquisition data into strategic decision dominance. Operating at the intersection of big data architecture and deep DoD procurement expertise, we specialize in maximizing enterprise platforms like Advana. Already speaking the language of DoD acquisition, we eliminate the traditional vendor learning curve, offering our partners an exceptionally low ramp-up time and rapid time-to-value. Turntech brings a tactical, execution-focused mindset to the Department's most complex challenges, engineering governed, scalable data pipelines and delivering the advanced analysis required to turn massive procurement datasets into actionable, audit-ready insights for mission leaders.

Core Competencies

DoD Procurement Analytics

Transforming fragmented acquisition data into strategic, actionable intelligence.

Advana Integration & Utilization

Maximizing the DoD's enterprise data platform to extract, structure, and visualize critical mission data.

Strategic Data Consulting

Bridging the gap between technical data execution and high-level mission strategy.

Big Data Architecture & Scale

Designing and implementing robust data pipelines tailored for complex, enterprise-level federal environments.

Differentiators

Unrivaled Advana Mastery

We possess native expertise in Advana's data ingestion, structuring, and extraction processes to deliver immediate impact. We minimize delays and maximize throughput.

Deep Domain Expertise

We speak the language of DoD procurement, understanding the policies, lifecycles, and exact pain points of end-users.

Technical Execution at Scale

We offer the rare combination of high-level strategic vision and the deep technical skillset required to make sense of massive datasets at an enterprise scale.

The Stakeholder Network

We know how to navigate the bureaucratic landscape, connecting the dots between data owners, platform managers, and mission leaders to drive rapid execution.

Past Performance

Advana Procurement Data Integration

Turntech's engineers led the charge in onboarding and integration for the vast majority of procurement datasets currently residing on the Advana enterprise platform. Our team has played a significant role in successfully establishing the data pipelines for critical systems, including EDA, PEE, WAWF, and SDW.

PBIS Migration & Mission Support

In strategic partnership with 540.co, Turntech provides direct mission support for the Procurement Business Intelligence Service (PBIS). After driving the team's successful migration into the Advana environment, our engineers now deliver advanced business intelligence services to optimize procurement visibility across the Department.
